Rules for the Spring 2010 Sale

This is the 75th All-Breed Performance Tested Bull Sale held in Southwest Missouri. Commercial and purebred buyers will have individual performance data available, along with pedigree, to select a prospective herd sire. The rules for the sale were developed by the Southwest Missouri Beef Cattle Improvement Association.

Required Performance and Conformation Information

- A. The bulls must be produced in a registered herd that is enrolled in the Missouri On-Farm Performance Testing Program and their respective breed association records program. Bulls may also qualify by being tested at an approved test station under university supervision.
- B. The bulls eligible for the 2010 Spring Sale must have been calved from May 1, 2008 through February 28, 2009.
- C. All calves in the herd eligible for registry must have been weighed at weaning for that season. (Herd definition: All cattle on a given farm and handled as a separate unit.)
- D. The bull calves nominated must be weighed at weaning (between 160 and 280 days of age.) They must have a 365-day weight ratio of 95% or more. If 10 or more male calves are sired by a given sire, they may be used for the season male average. The steers will be adjusted upward 5% to a bull equivalent to determine average weaning weight of male calves. (A steer is any calf castrated when weaning weights are taken.) A first time consignor may consign a bull, tested at an approved test station, to one sale, even though his entire herd was not tested.
- E. The bull's yearling weight must be taken at the associations recommended time (320 to 440 days for most breeds). He must have a 365 day weight of 1100 pounds or better and measure 49 inches or better at the hip.
- F. Bulls must rank in the 50th percentile or better for 2 of the following 5 EPD traits: Calving ease or birth weight, weaning weight, yearling weight, milk, and ultrasound/carcass/intramuscular fat for non-parent bulls in the most recent sire evaluation.
- G. All weighings must be supervised by the Regional Livestock Specialist or authorized personnel.
- H. Age of dam adjustments will follow the breed associations guidelines.
- I. If the bull has been in service prior to the sale, this will be announced from the auction block.
- J. Bulls to be eligible for this sale will have to be owned as a cow-calf unit prior to the time the calf is 120 days of age. Exceptions to this rule, partnership cattle, leased herds, etc., will be determined by the sale committee prior to consignment.
- K. All bulls must be semen tested and examined for breeding soundness by a veterinarian within 30 days of sale, using standard assay analysis of semen approved by the College of Veterinary Medicine, University of Missouri.
- L. Scrotal circumference as taken by the producer's veterinarian during the breeding soundness exam will be reported sale day. Minimum circumference 33 cm.
- M. All bulls must be at the sale location by 9:00 A.M. the day of the sale.
- N. Information not available at press time will be available sale day on supplement sheet.
- O. All potential carriers for known genetic defects for any breed have been tested and declared free of the defect.

TERMS AND CONDITIONS

TIME: Sale begins at 7:00 P.M. March 29, 2010.

BIDDING: Each animal will be sold to the highest bidder without reserve. A floor price will be \$1500 and if buyer bids floor price, the bull will be considered sold.

TERMS: The terms of the sale are cash. Bring your personal or local bank check.

DISPUTES: The auctioneer will settle any and all disputes as to bids by declaring all bids off and reselling the animal in question.

HANDLING: Each animal will be purchaser's risk as soon as sold, but will be cared for by the owner for a reasonable period until they are loaded, free of charge to the purchaser, but at his risk of loss or injury. All bulls are sold and will be paid prior to loading.

CERTIFICATES: A certificate of registry and transfer will be furnished for each animal sold by respective breeder.

BREEDING GUARANTEE: All animals of breeding age (15 months or older) at time of sale are guaranteed breeders. Bulls are guaranteed breeders if properly cared for and not used with the herd until 15 months of age. Any bull which settles at least one third of the healthy cows he breeds will be considered a breeder. Any animal that has not proven itself a breeder within six months after the sale date, if in healthy condition, and meeting the health regulations of the State of Missouri, may be returned to the farm of the seller, at the buyer's expense. The seller reserves the privilege of trying for a period of six months, to prove the animal a breeder. Should an animal fail to prove a breeder in the specified time period, the seller will refund the purchase price which shall be considered as full settlement and satisfaction of all claims. All complaints regarding breeding difficulties must be reported in writing by the buyer to the seller within six months.

ANNOUNCEMENTS: Announcements from the auction box will take precedence over the printed matter in this catalog.

CONTRACT: The above terms and guarantee shall constitute a contract between the buyer and the seller of each animal sold. All bulls sell under the standard terms and conditions set forth by the respective breed association.

SALE ORDER: The bulls will sell from the oldest to the youngest, in blocks of approximately one-third of the bulls of each breed in rotation. The breed rotation order will be Charolais, kGelbvieh, Balancer, Angus, and Lim-Flex. In cases of identical birth dates, the bull with the greater yearling weight will sell first.

HEALTH: Bulls have been vaccinated for five strains of Lepto within 30 days of the sale. Health certificates will be furnished.

LIABILITY: All persons who attend the sale do so at their own risk, and the sale committee and the Southwest Beef Cattle Improvement Association, and Springfield Livestock Marketing Center assume no liability, legal, or otherwise.

Expected progeny differences (EPD's) provide the best means of comparing genetic merit of animals within the breed. For each trait evaluated, the EPD incorporates the animal's individual and progeny performance with progeny performance information from other relatives. By utilizing national sire evaluation information, the evaluation also utilizes information from related traits and accounts, in part, for differences in the genetic merit of herdmates as well as genetic trends within the breed. Each trait evaluation predicts expected progeny performance relative to a fixed breed average - hence the term "Expected Progeny Difference." The key word is "difference". The EPD itself does not imply "good" or "bad" performance, only whether the performance of progeny is expected to be above or below that of another individual in that breed. EPD's are given as + or -, in this catalog. If neither a + or - is shown, that amount will be a +. Breeders should, on an individual basis, decide what is best for them by considering what traits are important to their program, their current herd performance, and the degree of change desired.

Percentile Rank - As the percentile moves toward 1, it indicates smaller birth weight EPD's and larger weaning, yearling, milk, and intramuscular fat EPD's.

Accuracy - Refers to the reliability of an EPD. The closer to 1 the more reliable it is with less change likely. PE refers to pedigree estimate which averages the sire and dam EPD. BKS refers to backsolution used to obtain breeding values of non-parents by back-solving from the predicted parental breeding value.

Calving Ease EPD - This is the difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf heifers.

Birth Weight EPD - The expected difference in average birth weight (lbs) of progeny. Birth weight reflects prenatal growth potential and may also be used as an indicator of calving ease.

Maternal Milk EPD - The expected difference in average weaning weight (lbs) of daughter's calves which is attributed to milking ability. This evaluation is obtained by subtracting 1/2 of the Weaning Weight EPD (the direct effect on growth) from the Maternal Weaning Weight EPD.

Weaning Weight EPD - The expected difference in average weaning weight of calves. The evaluation reflects the genetic influence on pre-weaning growth rate.

Yearling Weight EPD - The expected difference in average yearling weight of progeny. It reflects genetic influence on both pre-weaning and post-weaning growth rate.

Intramuscular Fat - This is a predictor of the difference in a sire's progeny for % intramuscular fat or marbling in the ribeye muscle. Larger amounts favor higher carcass quality grades.

MORE ON INDEXES

The catalog lists the more important selection indexes on a breed basis.

Angus - (\$Wean) Considers these impact areas: birth weight, weaning weight, maternal milk and mature cow size. (\$Beef) Considers feedlot and carcass merit.

Charolais - Terminal Sire Profitability Index (TPI) Weights EPDS of growth and carcass traits. Does not consider profitability when heifers are retained.

Gelbvieh - Carcass Value (CV) Based on quality grade, yield grade and weight specifications. Feedlot Merit (FM) Based on expected gain and feedlot efficiency.

LIM-FLEX - Mainstream Terminal Index (\$MTI) ranks animals on the assumption they receive premiums and discounts for quality and yield grades on the commodity beef market. Genetic merit for post-weaning growth is included.

SOUNDNESS SCORING

Hoof and soundness scoring is not an exact science, but in order to place a subjective score on these bulls for your consideration, a committee evaluates them at the sale considering hooves, joint angularity and movement. A scale of 1 to 10 is used with 1 being essentially unsound and 10 perfect. Keep in mind that perfection is seldom attained. Conditions that might be encountered and relative scoring is given below.

10 Perfect or near perfect in hoof size, toe shape, joint angles and movement. No blemishes.

8 Bulls would be considered basically sound. Good foot shape, even toes, good heel depth, correct slope to pasterns, legs and shoulders.

5 Bulls in this range have acceptable soundness with no serious problems. Would include mild toe unevenness, slight rolling of toes, moderate heel depth, some possible toe growth and only slightly excessive angle or straightness to shoulder, hock and pasterns.

3 One or more serious faults that impair their movement and expected longevity. Includes excessive toe growth, spread toes, hooves that roll under, corns, uneven toes, cracked hooves, too little or too much angle to shoulder, hock and/or pastern resulting in short or long strides. Possible swollen joints.
